DETAILED ACTION

Allowable Subject Matter

1. Claims 1-26 and 34-40 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Applicant invention is drawn to a network interface connected to a telecommunication circuit demarcation point. The network interface includes a test jack, test cord and a plurality of test conductors for connecting to a diagnostic device. The network interface further includes a switch that selectively placed into a first position and a second position. When the switch is placed in the first position, the operation of the active telecommunication circuit is monitored via the jack without disruption. When the switch is placed in the second position, the operation of telecommunication circuit is disrupted (i.e., isolated) thereby enables testing on one side of the telecommunication circuit via one of the test connections.

Prior art of record failed to teach or fairly suggest in combination the network interface that enables alternative testing or monitoring of the telecommunication circuit comprising a switch that selectively placed into a first position and a second position. When the switch is placed in the first position, the operation of the active telecommunication circuit is monitored via the jack without disruption. When the switch is placed in the second position, the operation of telecommunication circuit is disrupted thereby enables testing on one side of the telecommunication circuit via one of the test connections.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
